# CATALYTIC SECURE EMAIL BACKUP DATASHEET

## The Ultimate Protection for Office 365's Email, Contacts, Calendars, and Attachments

Many individuals assume that Microsoft® backs up their Office 365® email data but, in fact, it only replicates the data across its data centers. Unfortunately, replication in the cloud only provides data availability. It does not protect against data loss or provide point-in-time data archiving. With replication only, if a user accidentally deletes a mailbox or email, or a cybercriminal maliciously deletes your data, you may have lost that data for good. When you delete an item from a mailbox, it stays in the "deleted items" folder for only a short period of time before being completely removed.

Once a message, contact, or attachment is removed from Office 365, it is forever lost unless there is a point-in- time backup of that data. Because most companies need more protection than just a "deleted items" folder, there is an opportunity for companies to attach backup and off-site email archiving to their Office 365. With the scalability and amazing data protection capabilities of Secure Email Backup you can easily back up all your mailbox data to ensure that you have complete protection of your Office 365 mailboxes and enjoy peace of mind knowing your data is safe.

## BACKUP FOR OFFICE 365

Secure Email Backup offers a valuable backup service to protect all of your email data while also complementing Office 365. Using the console, we can control customers' backups, centrally view all activities, and receive problem alerts for all protected data — including Office 365 email. Using the flexible storage options customers can back up mailbox data to a local folder, network folder, or any private cloud storage.

Configuring backups for Office 365 email is extremely easy. The Backup agent connects to a customer's Microsoft subscription and provides full visibility into the client environment. The backup solution automatically syncs with each customer's Office 365 configuration and automatically recognizes new mailboxes as they are created.Customers can create custom backup plans for each mailbox, or enable default protection settings with just a few clicks.

## MANAGING EMAIL BACKUPS

Using the efficient web-based console, we can preview and search mails by subject, to/from, and sent/ received date ranges, and download attachments without the need to recover the data. Additionally, Catalytic can granularly restore individual emails, attachments, contacts, calendars, and tasks or even recover messages by sending them as an email right from the recovery console.

## REQUIREMENTS

Backup of Office 365 email requires a valid Microsoft Office 365 subscription that includes Exchange Online
